rockyou a few 18 character passwords

123456789987654321

Websites store our password in encrypted form.
They use the password to verify that it is us logging
into the account.

MD5 encryption

Password: target2!

MD5: fcb83491ade142ed34ff820ff86c4d08

3 minutes and 33 seconds to brute force

Password: Target2!

MD5: 1729862c51976bfc1bfcdbdb62541a96

41 hours, 58 minutes and 38 seconds to brute force.

If we reuse a password for more than one account and one of those accounts is exposed in a data breach

The hacker will use our email address and the exposed password and try to log into other accounts

When the hacker finds an account that reuses the password, the hacker controls the account

HaveIBeenPwned.com

Enter your email address.

The website will display all breached accounts associated with that email address

The website will also say if the account's password was exposed.

Password Lists or Reuse across accounts

We need to use a unique password for each account to ensure that if a password is leaked, loss is limited to that account.

Cybersecurity experts urge us to use long and complex passwords because it takes a long time to crack those passwords.

18	8k years	246bn years	65 qdn years	2 qntn yrs	76qntn years

The graph shows that a 9 character password with upper and lower case letters, a number and a symbol would take 800 years to crack.

Why is that entry colored orange?

Because hackers can use multiple GPUs to crack a password – also, GPUs continue to get faster

Also, that 9 character password might be in a password list

Choosing a master password for your password manager and passwords for websites

Federal agencies recommend 12 character passwords

hivesystems.io recommends complex passwords with 16 characters or more

To avoid using an existing password in a password list, use complex passwords with 19 characters or more

A Bitwarden Vault

Demo Account Displayed

The screenshot displays the Bitwarden desktop application interface. At the top, the window title is "Bitwarden" and the menu bar includes "File", "Edit", "View", "Account", "Window", and "Help". A search bar at the top right contains the text "justsome". The left sidebar shows a navigation menu with "All items" selected, followed by "Favorites", "Trash", and "TYPES" (Login, Card, Identity, Secure note). Below these are "FOLDERS" including Amateur Radio, Books, Car, Car Maintenance, Car Rental, Clothing, Communications, Computer Club, Computers, Systems, Debian and Debian De..., and Education, General. At the bottom of the sidebar are "My vault" and "Send" buttons. The main content area shows a selected item "JustSomeWebsite" by "UserJoe". The right pane, titled "ITEM INFORMATION", displays the following details:

- Name:** JustSomeWebsite
- Username:** UserJoe
- Password:** [Redacted]
- Folder:** Personal
- NOTES:** Created this account on 2/21/2023
- Updated:** Feb 21, 2023, 11:29:38 AM
- Created:** Feb 21, 2023, 11:29:38 AM

At the bottom of the interface, there are buttons for adding a new item (+), editing (pencil), copying (two documents), and deleting (trash can).

A Bitwarden Vault

Demo Secure Note Displayed

The screenshot displays the Bitwarden web application interface. At the top, the Bitwarden logo and name are visible in the browser window title bar. Below the logo, a menu bar contains 'File', 'Edit', 'View', 'Account', 'Window', and 'Help'. A search bar on the right of the menu bar contains the text 'justA'. The main interface is divided into three sections: a left sidebar, a central content area, and a right-hand information panel.

Left Sidebar: This sidebar contains navigation options. At the top is 'All items' with a grid icon. Below it are 'Favorites' (star icon), 'Trash' (trash can icon), and a 'TYPES' section with a dropdown arrow. Under 'TYPES' are 'Login' (key icon), 'Card' (card icon), and 'Identity' (ID card icon). Below these is 'Secure note' (notepad icon). A 'FOLDERS' section with a dropdown arrow follows, listing various folders: 'Amateur Radio', 'Books', 'Car', 'Car Maintenance', 'Car Rental', 'Clothing', 'Communications', 'Computer Club', 'Computers, Systems', 'Debian and Debian De...', and 'Education, General'.

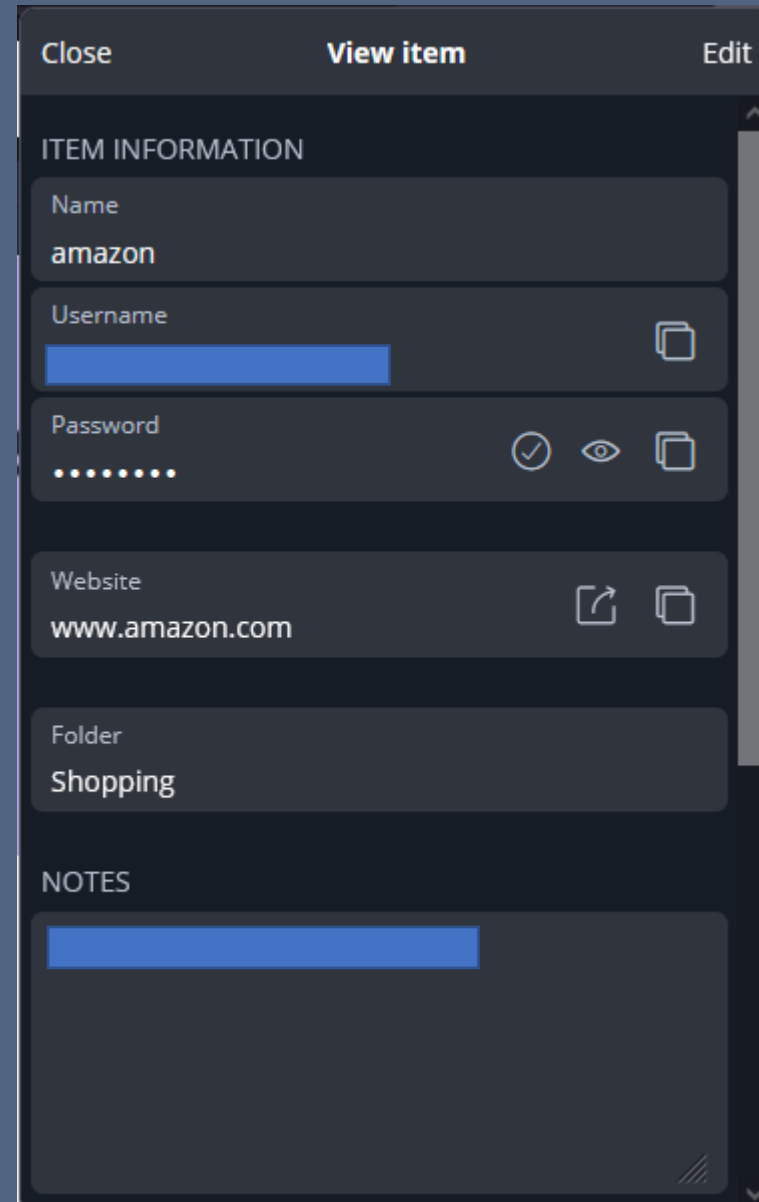

Central Content Area: This area displays the selected secure note, titled 'JustASecureNote' with a notepad icon. The note's content is currently blank.

Right-Hand Panel: This panel provides 'ITEM INFORMATION' for the selected note. It includes a 'Name' field with the value 'JustASecureNote' and a 'Folder' field with the value 'Personal'. Below this is a 'NOTES' section containing the text: 'This is a secure note. Currently, a secure note is limited to 10,000 characters. You can put a lot of information in 10,000 characters!' and 'This note was created 2/28/2023.' At the bottom of the panel, it shows the update and creation timestamps: 'Updated: Feb 28, 2023, 10:55:41 AM' and 'Created: Feb 28, 2023, 10:55:41 AM'.

Bottom Bar: The bottom of the interface features a toolbar with several icons: a lock icon labeled 'My vault', a paper plane icon labeled 'Send', a plus sign for adding new items, a pencil icon for editing, a notepad icon for creating a new note, and a trash can icon for deleting items.

Bitwarden Browser Extension

Account Login

What can a password manager do?

Create passwords or passphrases

Store your username and password for each account
– and notes about that account

Store secure notes

What else can a password manager do?

It can create email aliases

Our email addresses identify who we are

Using a different email alias on each account makes it difficult for a hacker who hacks one of our accounts to find our other accounts.

Bitwarden Password Manager

The email alias generator

What else can a password manager do?

It can autofill login pages

It allows copying and pasting of usernames and passwords

Tracking passwords using paper

Do you cross out old passwords?

Can you find the passwords you need?

Can you type the long, random, and complex passwords with the recommended 16, or more, characters?

Top ranked password managers

Cloud storage

Bitwarden*

1Password

Local storage

KeePassXC**

* Computer Club recommended - because it is open source

** KeePassXC is for technical users

Password managers – Cons – and responses

If the Internet is down, you can't access passwords

You won't need them – but can export your passwords

If you don't create recovery codes, you could lock yourself out

Create recovery codes and store in safe place

If a hacker has your master password, he has all your passwords

Use two-factor authentication to prevent hacker access

What about the LastPass data breach?

If you used a strong master password, your data is safe

LastPass lost control of access to user's data vaults. The vaults were copied by someone

Those individuals can now try to crack user's master passwords, using the copy, whenever they wish

Why move from LastPass? LastPass did not keep up with current best practices for encryption
