

# Managing Your Modem and Router

A Computer Club Class for  
the Renaissance Education Series  
May 2, 2022, 10:00–11:00 a.m.

Presenter: Tony Poulos

**Modems**

**Routers**

**Apartment Wi-Fi Network**

**Troubleshooting**

**TOPICS**

**MODEM**

# Modem

- **Modulator/Demodulator**
- **It takes the signals that come from your Internet Service Provider, or ISP, and translates them into an Internet connection for your Wi-Fi router to broadcast.**
- **Typically, no Setup or System Settings**

- Power** — [Power icon]
- Receive** — [Receive icon]
- Send** — [Send icon]
- Online** — [Globe icon]

**Ethernet cable to router**

**Coax connection to wall outlet**

**AC power**

# Modem

- **Data Over Cable Service Interface Specification (DOCSIS)**
  - An international telecommunications standard that permits the addition of high-bandwidth data transfer to an existing cable television (CATV) system.
- Willow Valley recommended modems include: Arris Surfboard DOCSIS 3.0 modem, model SB6183 or SB6190
- No maintenance required
- Can connect a Laptop to Modem for Testing
- Modem/Router combo?

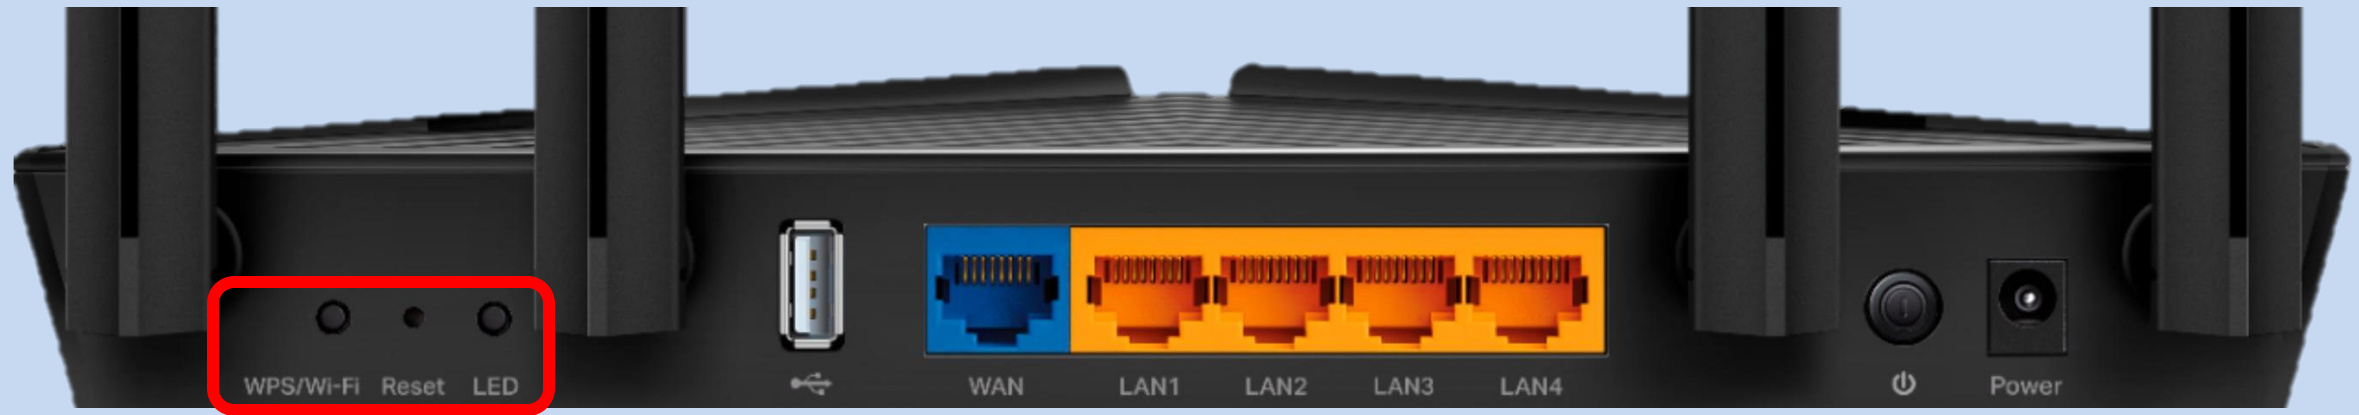

**ROUTER**

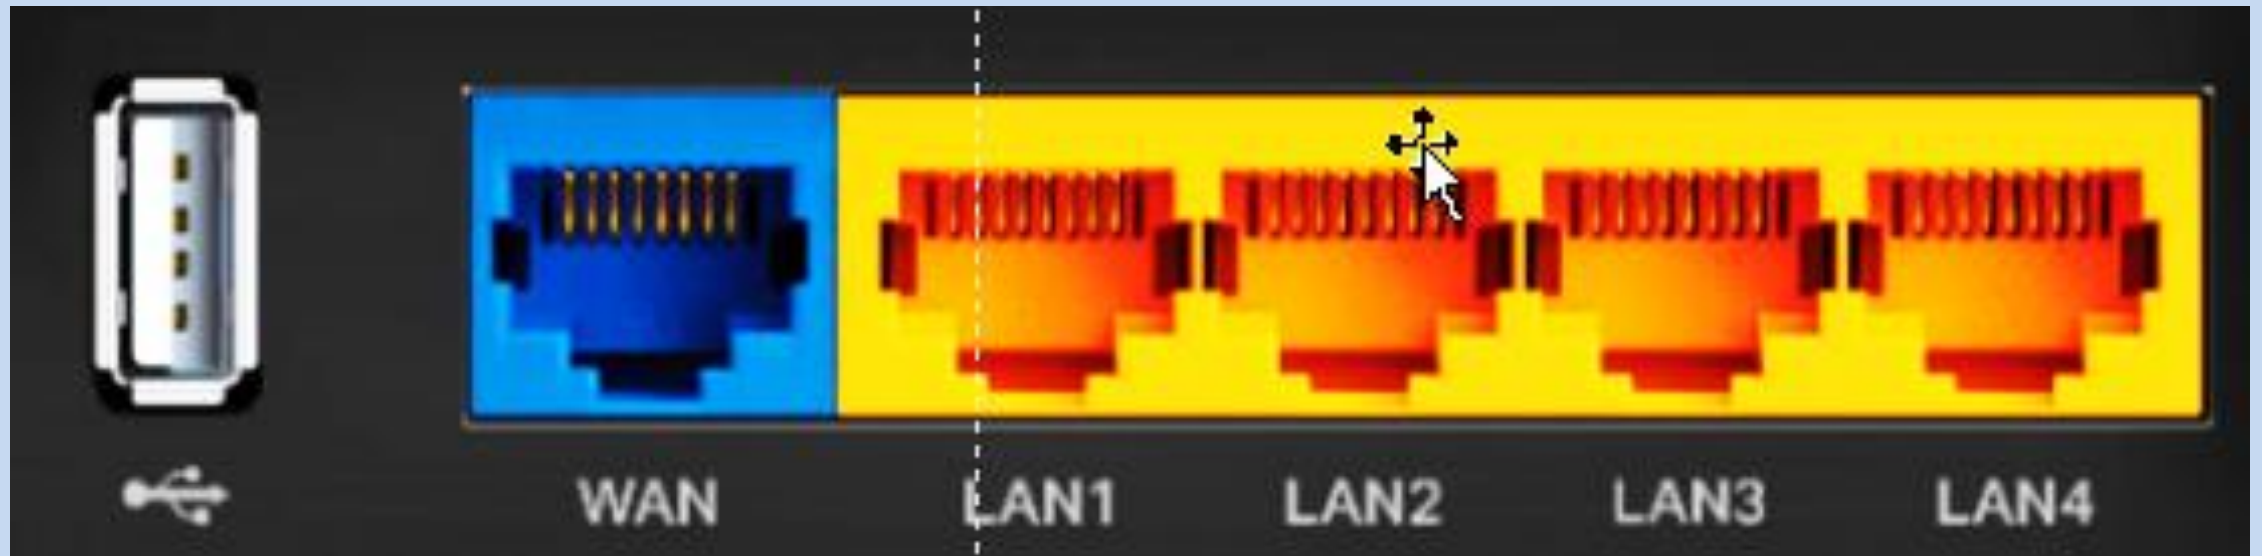

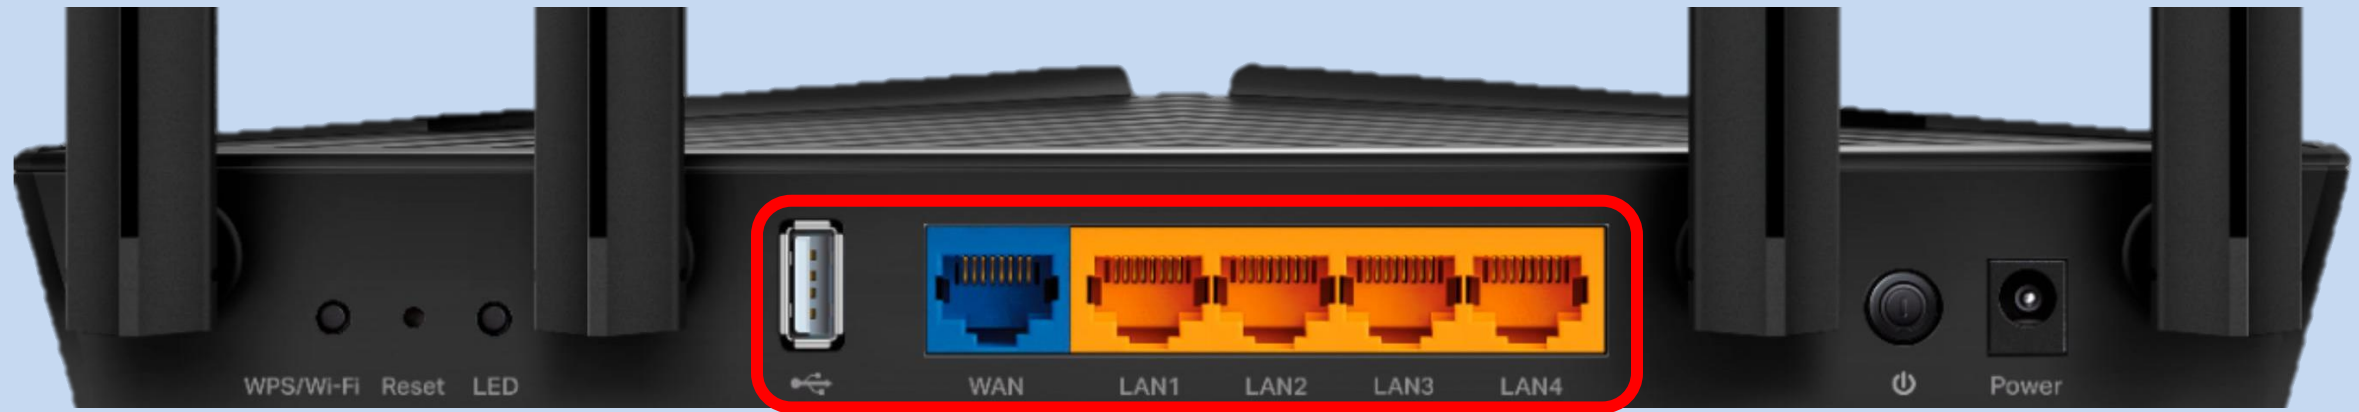

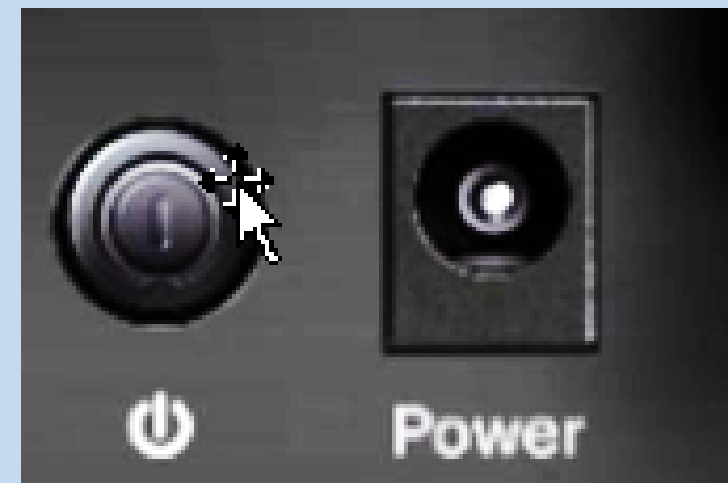

# Routing

- **Home and small office routers simply forward data (IP packets) between the computer and the Internet.**
- **Your router's main responsibility is to route data between devices in your home, and between those devices and the Internet.**
- **The system of interconnected devices in your home plus the router itself collectively makes up your home network.**

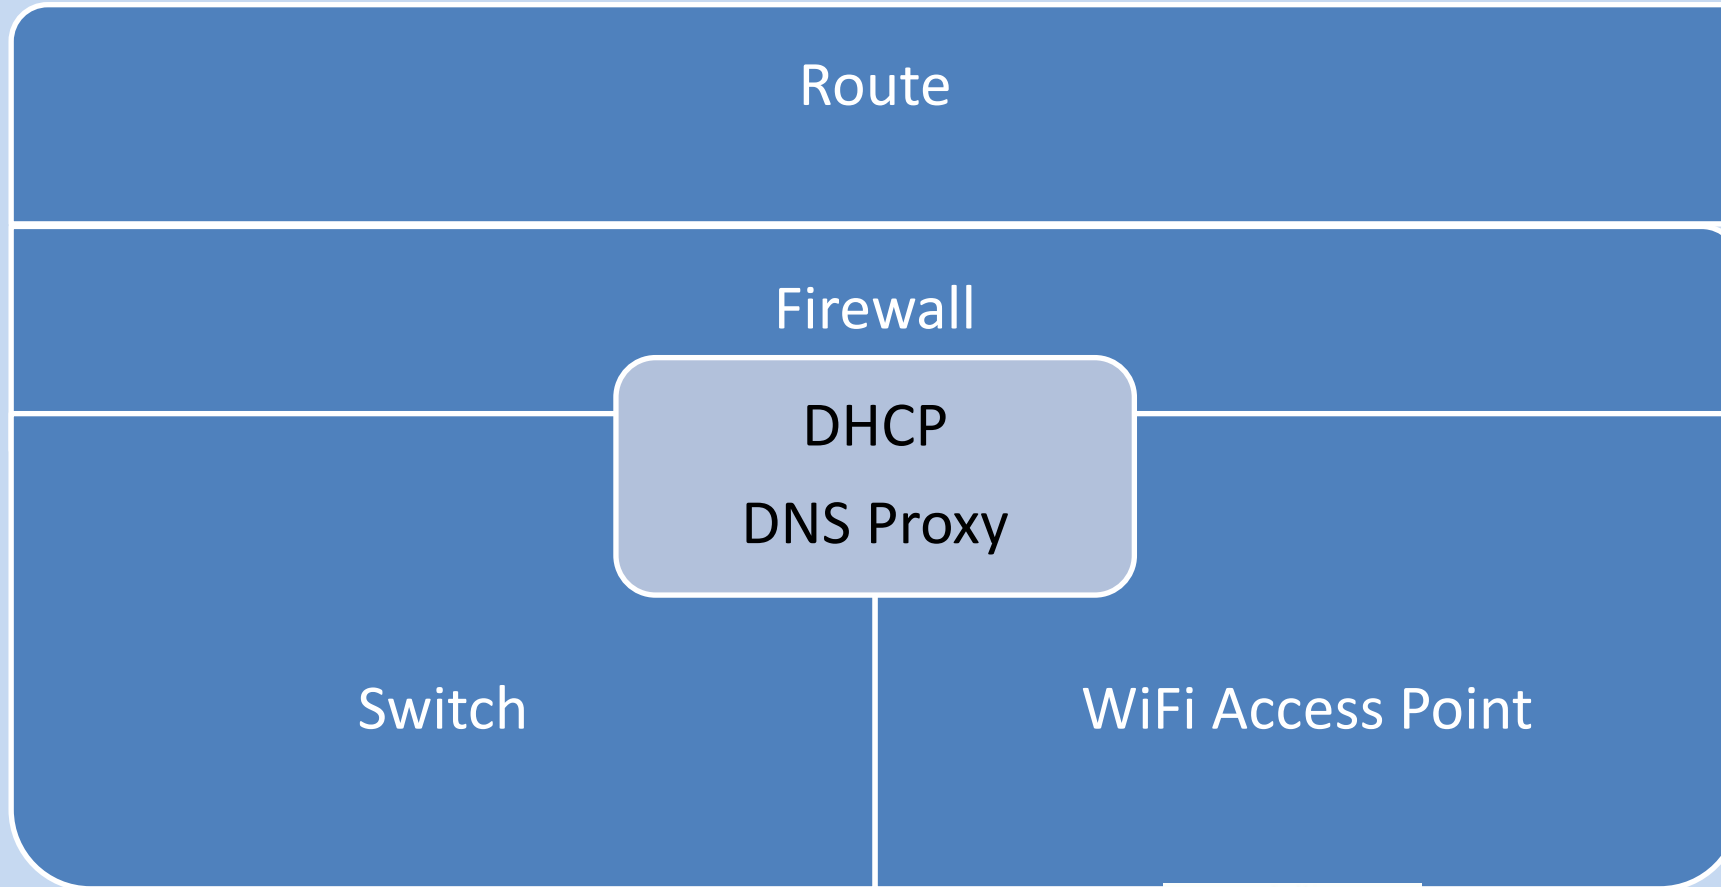

**TP-Link AX1800**

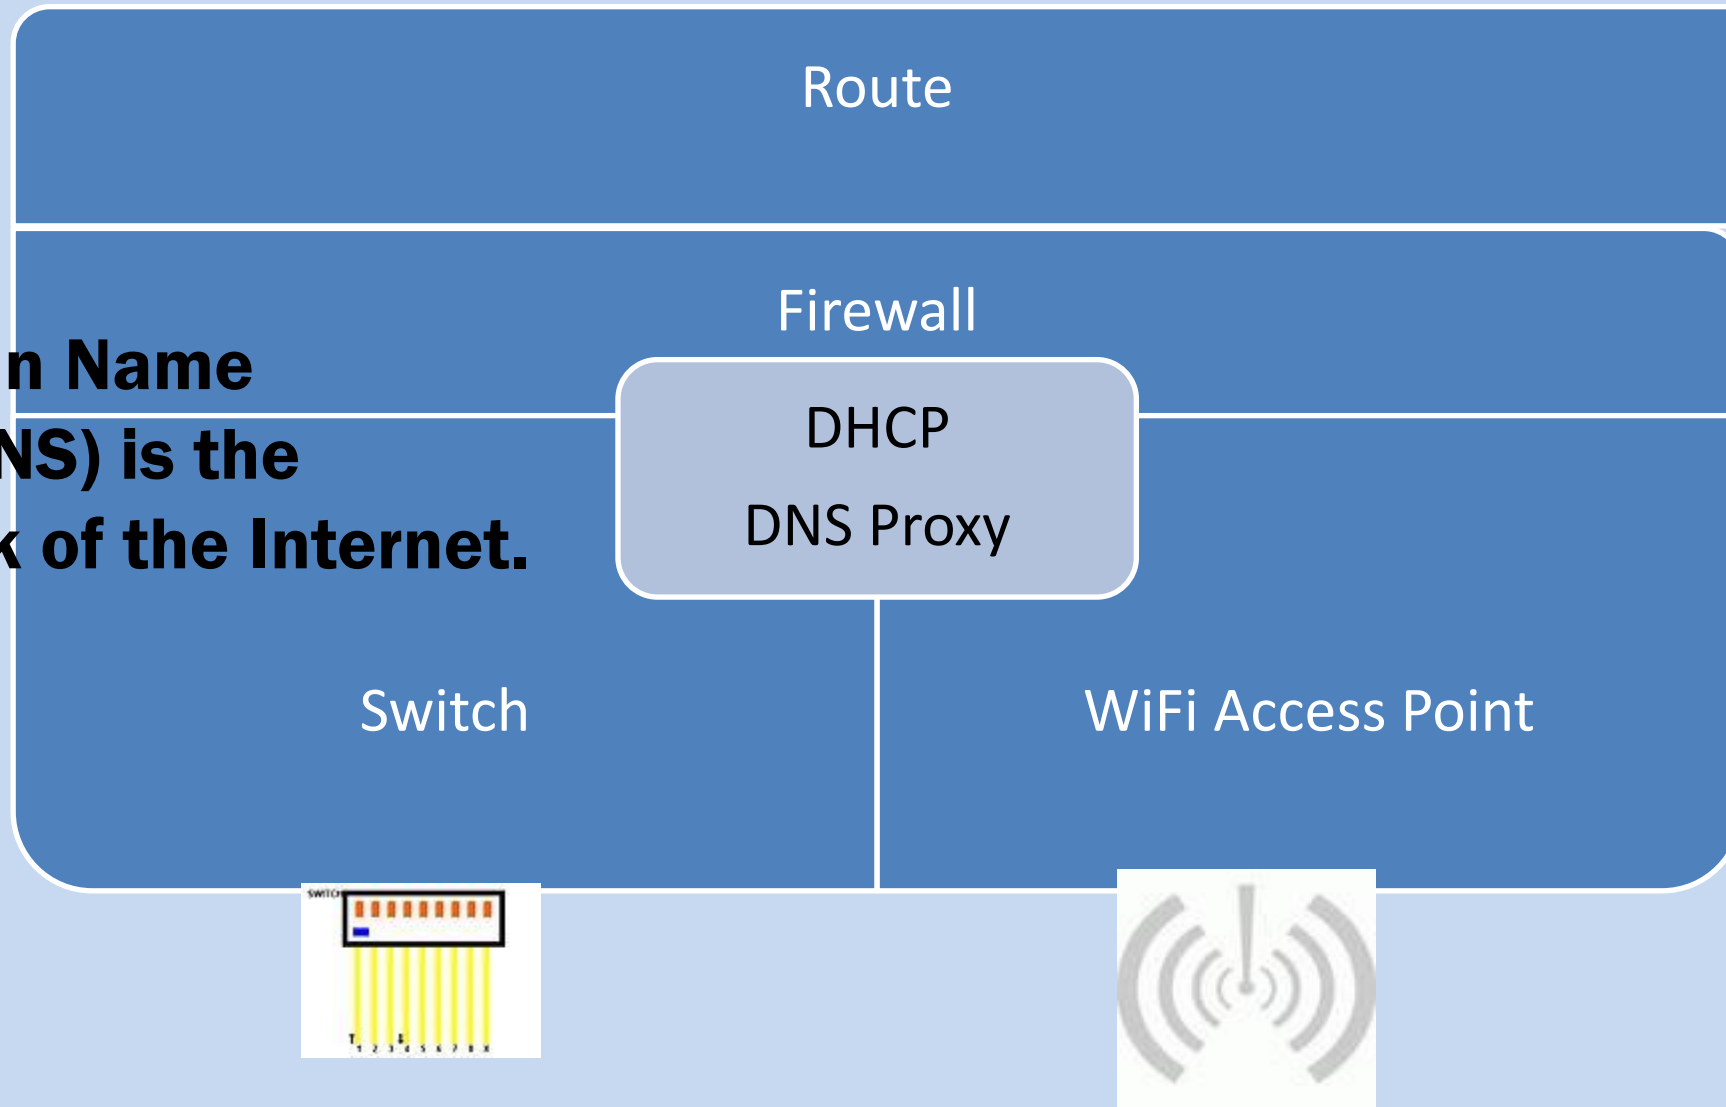

# Modern Router

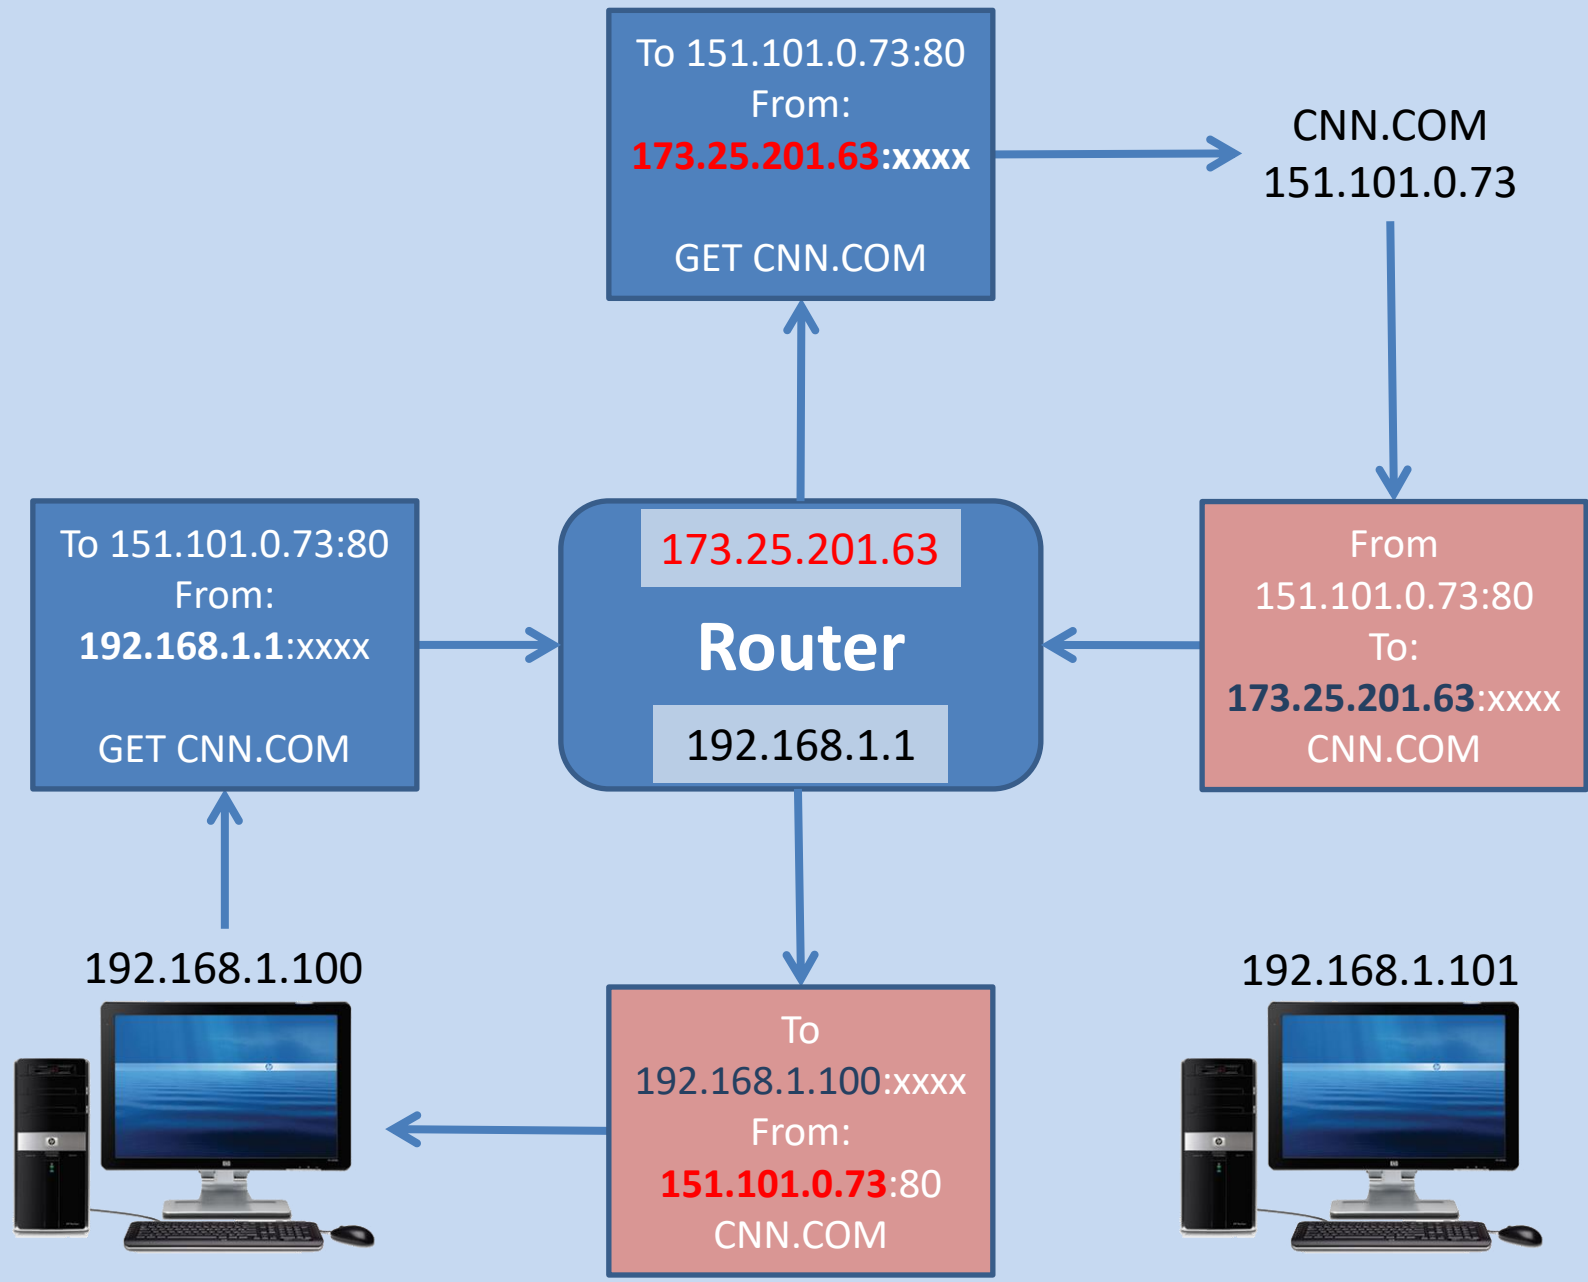

**DHCP (Dynamic Host Configuration Protocol) is a network management protocol used to dynamically assign an Internet Protocol (IP) address to any device, or node, on a network so they can communicate using IP.**

**The Domain Name System (DNS) is the phonebook of the Internet.**

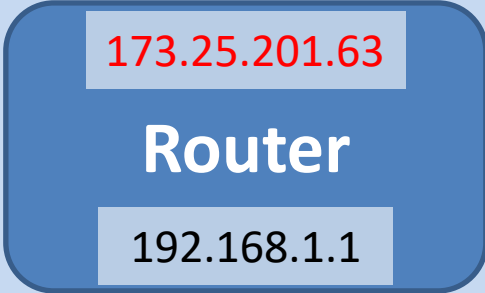

# Routing

- **Logs Outgoing Requests**
- **Accepts Only Requested Traffic**
- **Provides Addressing for LAN (DHCP)**
- **Directs Incoming Traffic to Proper Device**

**An IP address, or Internet Protocol address, is a series of numbers that identifies any device on a network.**

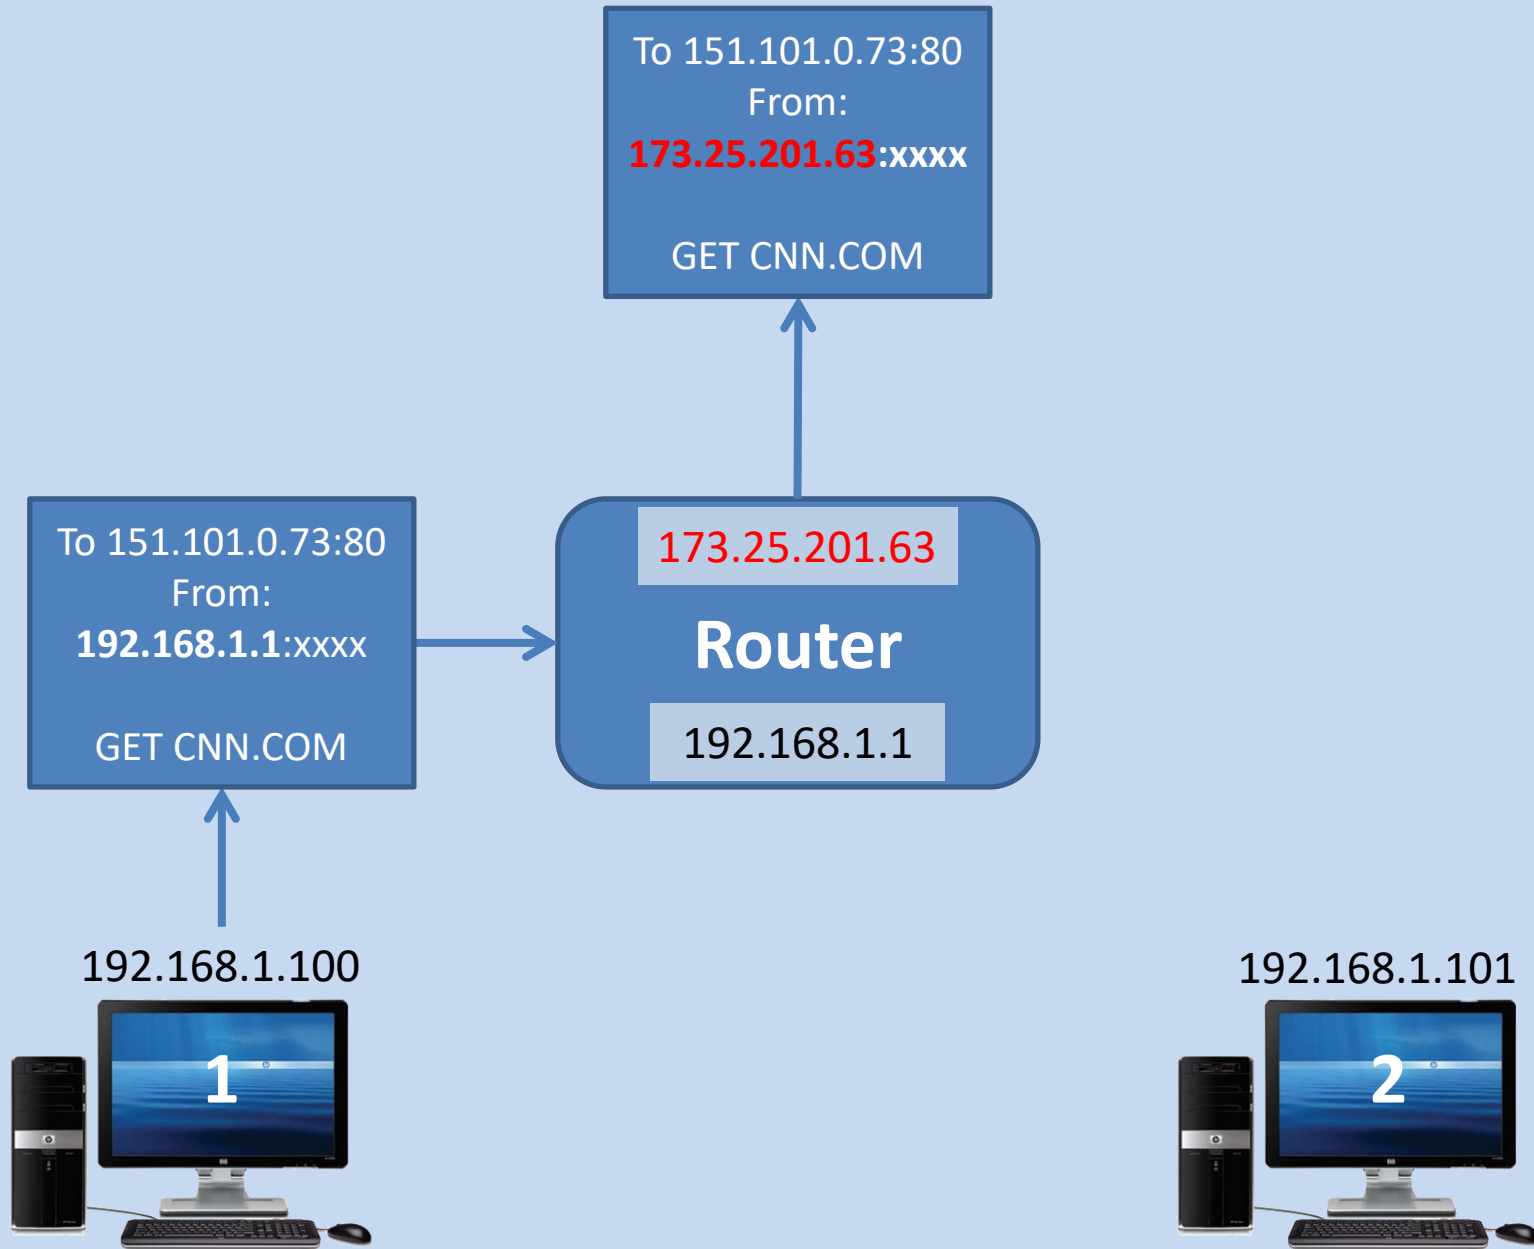

192.168.1.100

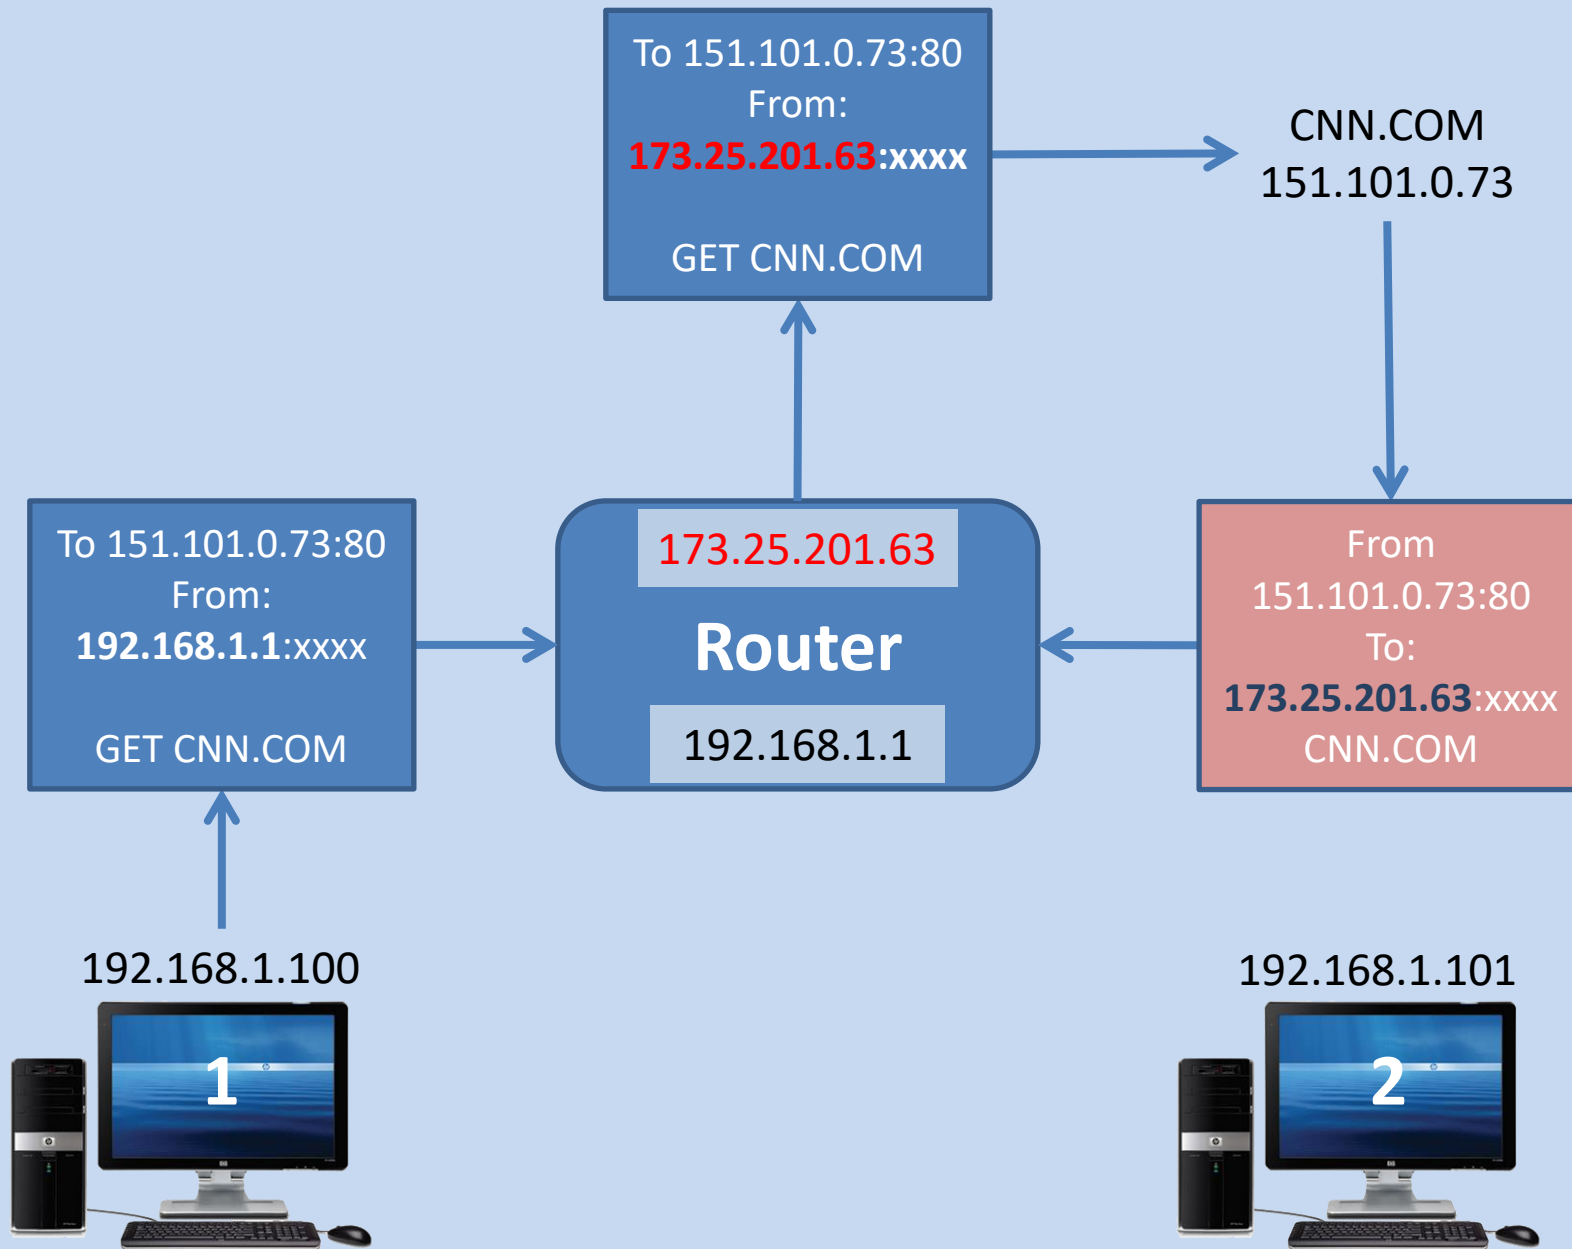

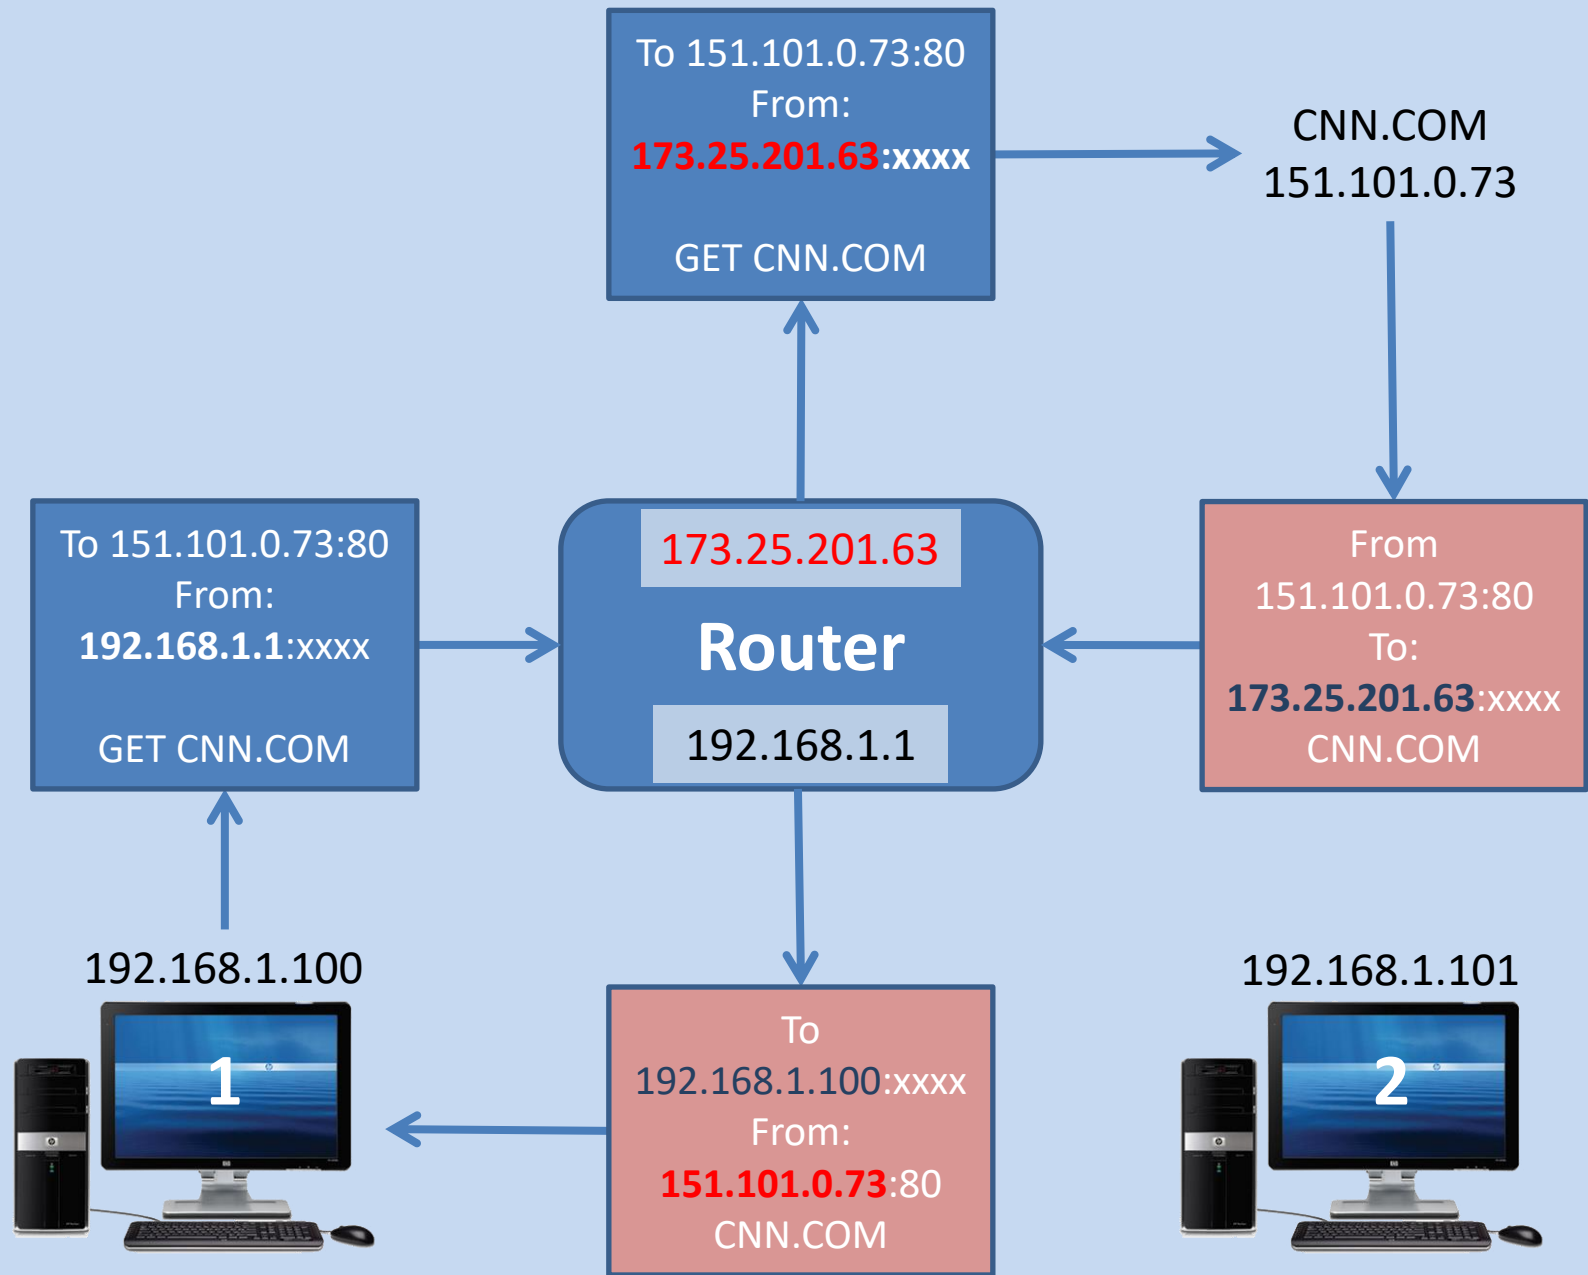

192.168.1.101

## **2.4 GHz vs 5 GHz**

- **2.5 G has longer range, but isn't as fast**
- **5 G is faster, but has a shorter range**
  
- **My recommendation: use 5G unless signal strength is a problem**

# Mesh Routers

- **A main router connected to the Internet plus satellite routers**
- **Usually for large homes**
- **A Wi-Fi extender**

# Signal Attenuation

<b>Obstacle</b>	<b>Additional losses (dB)</b>	<b>Effective distance*</b>
Open space	0	100%
Window without tinting (no metalized coating)	3	70%
Window with tinting (metalized coating)	5-8	50%
Wooden wall	10	30%
Interior wall (15.2 cm)	15-20	15%
Bearing wall (30.5 cm)	20-25	10%
Concrete floor/ceiling	15-25	10-15%
Monolithic reinforced concrete slab	20-25	10%

**Keenetic.com.**

# Check Speed

## Speedtest.net by Ookla

**Netflix**  
**5 Mbps for full HD**  
**25 Mbps for 4K**

**In General**  
**25 Mbps down is**  
**good for most**  
**residents**

**Mbps, megabits per second**

# Property Management

- **From Property Management>TV and Internet Information>CampusNET**
- **Modem \$60 Router \$120 from Willow Valley**
- **Recommended modems include: Arris Surfboard DOCSIS 3.0 modem, model SB6183 or SB6190.**
- **TP-Link Router for Wireless, model AX1800 (Archer AX21)**
- **AVOID “ZOOM” brand modems—connection issues have occurred with this brand**

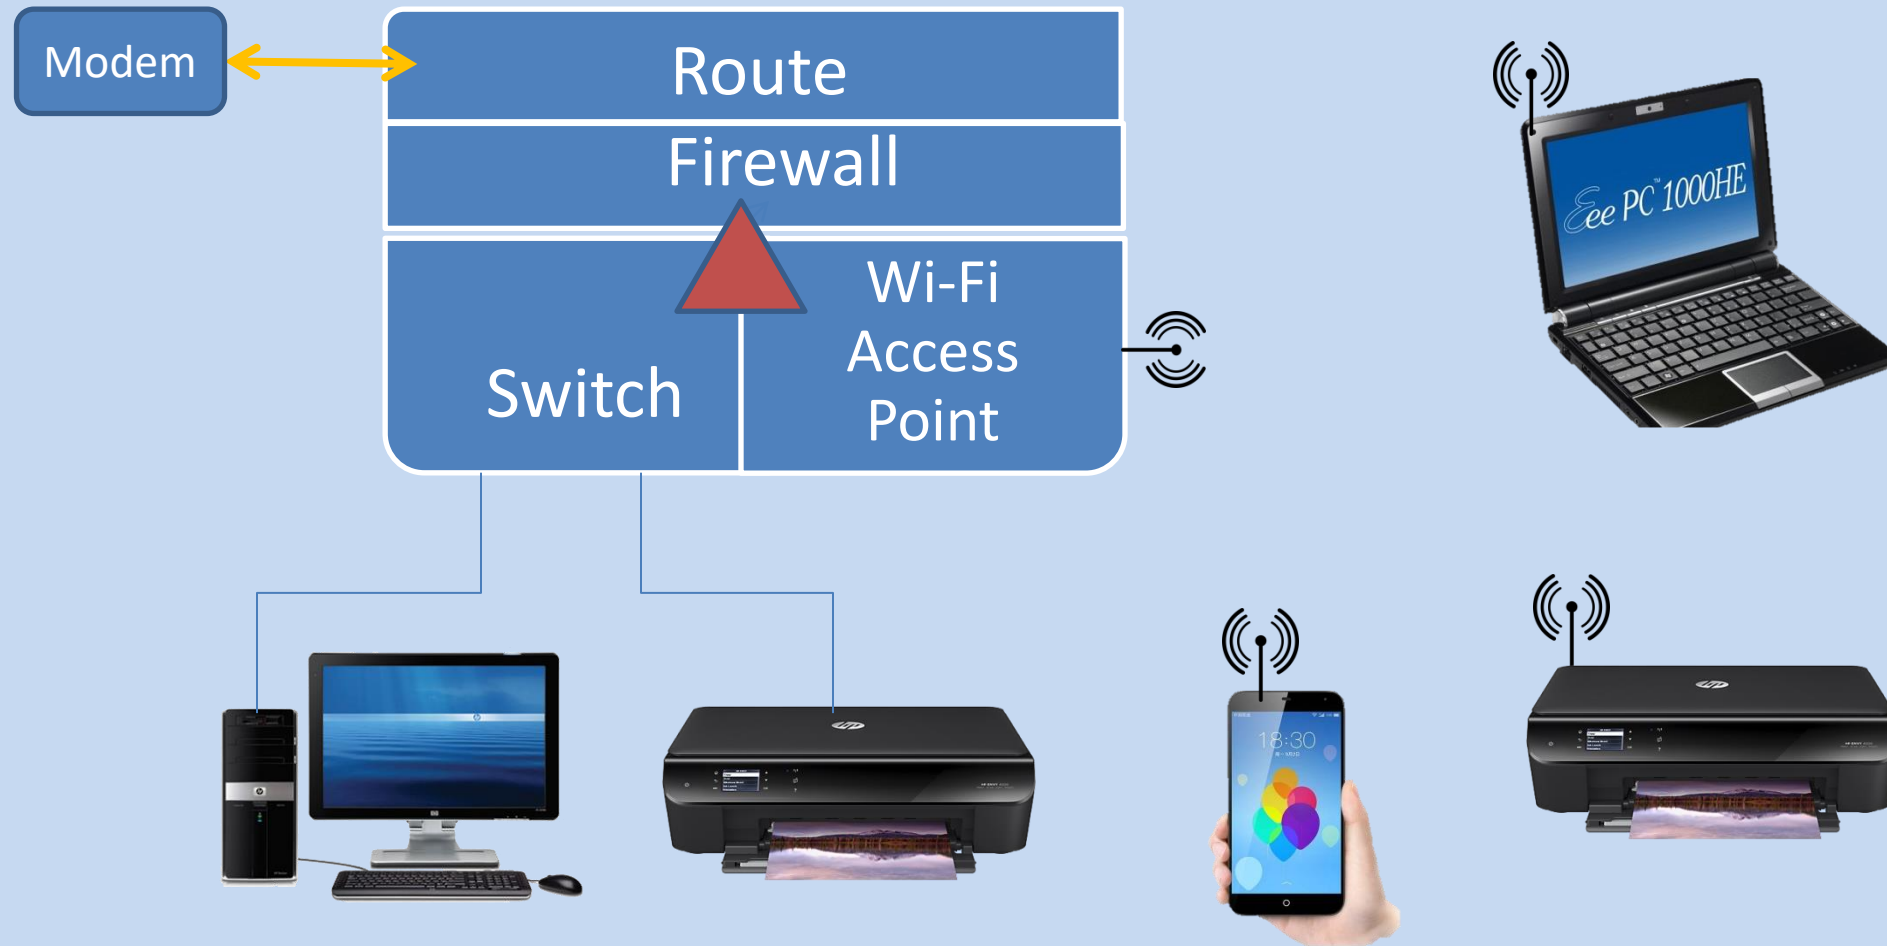

# Maintenance

- **Periodically check for router firmware updates**
  - **Sign into router setup screen**
- **Periodically check for updates to the network adapters in your computer**
  - **Device Manager>Network Adapters right click on Wi-Fi adapter>select update driver>search automatically for drivers**

# **APARTMENT WI-FI NETWORK**

# Sample Apartment Network

Modem

Local Area Network (LAN)

192.168.1.100

192.168.1.101

192.168.1.102

# Local Area Network

- **Router serves as an interface between the Internet and the LAN**
- **Each Device in the LAN has a unique address**
- **Portions of Internet Address Range reserved for local “Private” network addressing**
- **Addresses usually provided by the Router**

# Nearby Networks

**TROUBLESHOOTING**

# What Devices are Affected?

- **Single Wired Device**
- **Single Wireless Device**
- **All Wired Devices**
- **All Wireless Devices**
- **All Devices**

# I've Lost My Internet Connection

- **What does the network icon in Notification area show?**

- **Modem and router lights on?**
- **Is Wi-Fi on for both computer and router?**
- **Are other devices working?**

# **I've Lost My Internet Connection**

- **Turn off modem, router, computer.**
  - **Turn on modem, wait five minutes or until stabilized**
  - **Turn on Router, wait five minutes or until stabilized**
  - **Turn on computer, wait five minutes or until stabilized**
  - **The sequence is critical**
- **Unplug and reinsert ethernet cables**
- **Plug modem directly into wall outlet**

# **I've Lost My Internet Connection**

- **Use Troubleshooting button in the Network and Sharing Center**
- **Use a channel analyzer to check for channel interference**
- **Update router firmware and Network Adapter driver**
- **Substitute other hardware and cables**

# I've Lost My Internet Connection

- **Buy a new router**
  - About every five years
  - The technology changes quickly
- **1997 802.11 2.4GHz**
- **1999 802.11**b** 2.4GHz**
- **2003 802.11**g** 2.4 GHz**
- **2009 802.11**n** 5/2.4GHz**
- **2013 802.11**ac** 5 GHz**
- **2020 802.11**ax** 5/2.4GHz**

# Router Access

- **Comcast 10.0.0.1**
- **NetGear 192.168.0.1, 192.168.1.1**
- **airPort 10.1.0.1**
- **LinkSys 192.168.1.1**

# IPConfig

C:\> Command Prompt

Windows IP Configuration

Unknown adapter ProtonVPN TUN:

Region Selection

Region: North America

Smart connect

Enable Smart Connect - Let the router select the best WiFi band for your WiFi connection. With Smart Connect, you must use the same WiFi network name (SSID), security options, and password for all radios for which you enable Smart Connect. One Wireless Network Name (SSID) for 2.4G and both 5G radios

Wireless Network (2.4GHz b/g/n)

Enable SSID Broadcast

Name (SSID):

NETGEAR74

Channel:

Auto

Mode:

Up to 600 Mbps

Security Options

- None
- WPA2-PSK [AES]
- WPA-PSK [TKIP] + WPA2-PSK [AES]
- WPA/WPA2 Enterprise

Password (Network Key):

wittybutter651 (8-63 characters or 64 hex digits)

Wireless Network (5GHz a/n/ac)

5GHz-1

Enable SSID Broadcast

Name (SSID):

NETGEAR74-5G-1

Channel:

44

Mode:

Up to 1300 Mbps

Security Options

- None
- WPA2-PSK [AES]
- WPA-PSK [TKIP] + WPA2-PSK [AES]
- WPA/WPA2 Enterprise

Password (Network Key):

wittybutter651 (8-63 characters or 64 hex digits)

5GHz-2

Enable SSID Broadcast

Name (SSID):

NETGEAR74-5G-2

Channel:

153

Mode:

Up to 1300 Mbps

Security Options

- None
- WPA2-PSK [AES]
- WPA-PSK [TKIP] + WPA2-PSK [AES]
- WPA/WPA2 Enterprise

Password (Network Key):

wittybutter651 (8-63 characters or 64 hex digits)
